13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

Subject well completed on 08/26/19. DJR Operating is aware of sensitivity of formations caused by unconventional aggressive flowback practices commonly used to increase initial production rates. This sensitivity can be mitigated by effectively monitoring & controlling initial rates & pressures by optimizing Choke Management Procedures that effectively manage drawdown pressure to reduce fracture conductivity and to increase cumulative production. Conservative drawdown strategy to control bottom hole fluid velocities require a longer period of flaring to clean gas of N₂ and also allows for better understanding of the well's long-term potential. DJR respectfully requests a 30-day flare extension.
