13. Describe Proposed or Completed Operations

Due to the expectation of extreme losses in the coal interval if the 7" casing depth is to be set through the coal, it is proposed to instead set 7" casing above the coal.

The revised casing depth (7") will be approximately 100' (between 50' and 150') below the top of Fruitland formation. Top of Fruitland formation is 2922' TVD, therefore the revised setting depth would be approximately 3022' TVD. The measured depth of the 7" casing depth will be 3131'.

The aforementioned change causes a change in the directional plan, which causes a minor changes in the measured depth at TD. Total depth remains at 5832' TVD. Measured depth at total depth will be 5941' (previously 5920').

The revised directional plan is attached.

The cement slurries, percentage of excess cement and the intention to circulate cement to surface remains unchanged. The slurry volumes will change slightly in accordance with the revised depth.

14. I hereby certify that the foregoing is true and correct.
