In conjunction with previously approved Sundry of well work to DO shoe track to TD, CO & Install DynaSave Pump (approved on 12/15/2006), Chevron Midcontinent, L.P. respectfully requests permission for installation and modification of existing surface production facilities to handle anticipated increases in produced volumes (water). This includes installing dual flow lines, relocating an existing compressor for safety, and installing a 95 Bbl below grade Pit Tank for blow down and/or excess produced water. Current plans are to initiate this surface facilities work within the next three weeks. Currently there is a pumping unit, separator and meter run existing on location. This work will all reside on the current pad, thus no "new disturbances" are anticipated. Attached is a standard diagram of the Pit Tank for your use and review.

Your approval of this request to install and upgrade these surface facilities will enhance the environmental and economic capabilities of this well and lease.
