13 Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

M&G Drilling Company requests administrative approval for surface commingling natural gas production from the Krause#22S (Basin Fruitland Coal 71629) and Krause#71 (Kutz Fruitland Sand 79600) wells.

Both wells produce from a common Federal Lease No. NMSF- 078863 and both have common ownership. M&G Drilling plans to produce the commingled gas through a central compressor, thus lowering operating expenses and extending the economic life of the wells and increasing their ultimate recoveries on the lease. We anticipate the only fuel requirements to be on compressor engine and separator. All flow lines will be pressure tested appropriately.

The Krause #71 will be equipped with an allocation meter, which will be maintained by M&G Drilling in accordance with State and Federal Regulations. The production from the Krause #22S will be determined by a subtraction method, the difference between the volume recorded at the sales meter and the sum of the volume recorded at the Krause #71. Produced liquid will not be surface commingled.

Notice has been filed concurrently on Form C-103 with the NMOCD.
