13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

Due to the closed loop system, Energen Resources would like to the change the cement volumes for the C.J. Holder #600. The production casing will be decreased due to limited holding containers while circulating cement returns back to surface. This change will prevent any spills that can occur by using less excess cement.

Production casing cement volumes will change as a result of caliper logs. Volumes will change if hole caliper shows the drilled wellbore to be under 100 % excess of the planned hole diameter. The % excess above caliper will be determined after the well is drilled and logged to evaluate formation and wellbore integrity. This amount shall be no less than 30 % above caliper volume.
