13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

This sundry is submitted in regards to the above-referenced BLM letter, concerning the cement job completed during the setting of the production casing and the second stage cement top of 1055'. On 1/21/09, after running and reviewing the Cement Bond Log, Troy Salyers of the BLM gave verbal approval of the cement job to Dennis Reimers (Agent for Pro NM Energy). However, on March 4, 2009, Pro NM Energy received the above-referenced letter from Stephen Mason with concerns of the 1055' cement top.

After further review, today, March 12, 2009, Dennis Reimers received a call from Troy Salyers, verifying that he and Stephen Mason closely examined the Cement Bond Log and it was confirmed that the CBL shows a firm cement top of 1055' with cement stringers above it. It would be unlikely that cement could be circulated through these stringers to the surface casing and therefore no remedial cement action is required.

First delivery of the well is expected as soon as possible.
