3. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Due to declining production the decision was made to re-cavitate this well. On 7/23/03 we pulled the 2-7/8" tubing, and 5-1/2" liner. During the recavitation process we cleaned out to 3425'. The original hole was drilled to 3528'. When cleanout was completed we set the new 5-1/2" J-55 17# liner, drilled and tapped 4 hpf, @ 3405'. Liner hangar is set @ 3027'. Liner was set on 8/18/03. New 2-3/8" tubing was run on 8/20/03 set @ 3361'. Well was put back on production. We determined that the plugs in the liner were not drilled out correctly. We pulled the tubing and perfed the liner, 4SPF across the coal stringers @ 3087'-91', 3106'-3110', 3113'-3115', 3256'-3262', 3272'-3280', 3338'-3350', and 3384'-3394' on 9/25/03. 2-3/8" tubing was run to 3390' on 9-26-03. 3/4" rods and an 1-1/2" rod pump were also installed in the tubing. A Lufkin 114 pumping unit was set also. We are waiting on emissions permits to start the unit. The pits used during the cavitation were constructed in the previously disturbed reserve pit area and has been back filled and recontoured, ready for reseeding. Well is on production.
