If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* While digging holes in front of the fire tube hatches to line and clean the tanks, some of the holes had water run in from the sides (approx. 2 gallons). The source of the water was originally thought to be natural. However, 2 small holes were discovered in a tank. The amount of produced water that seeped from the holes is unknown.

Describe Area Affected and Cleanup Action Taken.\* The affected area was tested for tph. The results (attached ) showed the tph levels to be "non-detect". Therefore no remediation is required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
