## Workover Procedure January 22, 2004

Well:

Federal 28 No. 2

Field:

Whitewash Mancos/Dk

Location:

1850' fnl & 790' fwl

**Elevation:** 

6,673' GR

Sec. 28, T25N, R9W, NMPM

\_

6,685' KB

San Juan County, New Mexico

By:

Connie Dinning

#### Procedure:

Note: All Fluids to be 2% KCl based.

#### Prior to Move In

1. Check wellsite for anchors.

2. Dig pit if necessary.

- 3. Open tubing and casing to production line to equalize. **Note:** Plunger lift equipment is in tubing.
- 4. Haul pumping unit, engine and rods to Federal 28 No. 2. Prepare material transfers for all equipment moved to well.
- 5. Haul in 10 jts. 2 %" tubing.
- 6. Order in frac/test tank(s) w/ riser, working external gauges & two good 4" valves. Fill w/ 2% KCl city water or filtered water. Refer to frac job design for exact volume and number of tanks.

## Pull Tubing, Log, and Isolate Dakota

- 1. MIRU workover rig, PU additional tbg and check for fill before TOH w/ tbg. (clean out any fill w/ air package at end of job prior to landing tubing & running pump/rods).
- 2. RIH w/ 4  $\frac{1}{2}$ " casing scraper to PBTD at  $\pm$  6550' KB.
- TOH w/ scraper & tubing.
- 4. MIRU wireline company. Run Gamma Ray Correlation Log from PBTD @  $\pm$  6550' to 5300' KB or minimum run interval.
- 5. RIH w/ drillable BP, set @ ±6000' KB.
- 6. Load hole with 2% KCl water and pressure test to 3500 psi.
- 7. If well does not pressure test, PU packer, isolate holes and squeeze as necessary.

## Perf & Ball off Gallup

1. Perforate Gallup with 3 1/2" casing gun, w/ one select fire shot per foot per Federal 28 No. 2 Induction Log dated 8/4/82 as follows:

5345', 5356', 5358', 5372', 5374', 5380', 5407', 5430', 5440', 5462', 5464', 5477', 5486', 5508, 5510', 5522', 5531', 5542', 5548', 5569', 5582', 5602', 5728', 5878', 5880'; **25 total holes.** 

2. TIH w/ tubing and packer.

- 3. Set packer @ ± 5300' KB.
- 4. Pump 300 gallons 15% HCl and 37 RCN ball sealers down tubing.
- 5. Attempt to ball off to 3500 psi.
- 6. Release packer and TIH to 6000' to knock off balls.
- 7. Swab well down to 5300'.
- 8. TOH & lay down packer.

### Fracture Stimulation

- 1. Install wellhead isolation tool.
- 2. RU frac crew. Fracture stimulate the Gallup formation with 70 Quality foam with 20# X-Linked base gel and a total of 100,000 lbs. of 20/40 mesh Brady sand (detail design to be provided).
- 3. Shut well in. RU flowback manifold to test tank. SI well for  $\pm$  4 hrs to allow gel to break.
- 4. Blow back on 1/2" positive flow choke, and flow well to clean up.

## **Drill Out BP and Run Production String**

- RU air package. TIH w/ bit (or mill) and drill collars on 2-3/8" tbg, clean out sand using air to BP.
- 2. Drill out BP and continue cleaning out well down to PBTD (6550').
- 3. TOH and lay down collars and bit.
- 4. Run production tubing string with 20' mud anchor (open ended) w/ small hole near top and seating nipple. Land production tubing with top of MA at or below bottom of Dakota perfs at approximately 6420' KB (Bottom perf @ 6419' KB).
- 5. Nipple down BOPs. Pick up 11/4" pump and run in hole on rods as follows:

40 ea. ¾" plain 129 ea. ¾" plain

16 ea. 3/4" plain

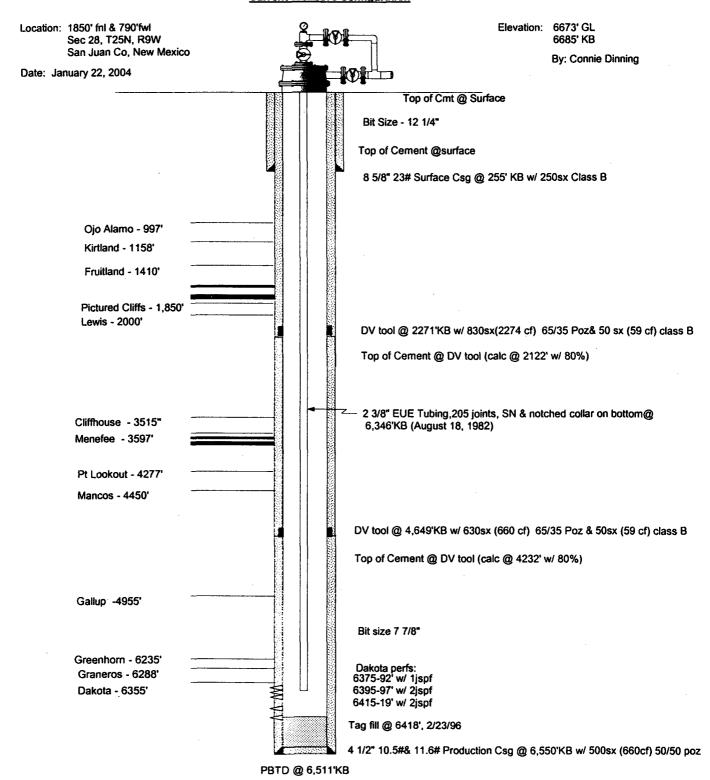

72 ea. 3/4" scrapered

- 5. Load tbg w/ water and check pump action before RD.
- 6. RD & MOL. Report production for two weeks.
