DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

350' Dakota test: Dry. 0' to 195' Rd, 195' to 250' Rd; Rd. to TD 350'.
Should we have lost oil, we planned to set 50' of 5 1/2" casing and set it with 8 SKS of cement. If we completed we would have set 2 7/8" tubing 15' then our production sands, and cemented them our production sands with 8 SKS of cement, circulating the cement. We planned then separate our production zones with 1 barrel of acid on the perforating gun to clear our sands. Then we planned to set the pump & tank, by necessity.
Our hole size is 4 3/4" -

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
