The elevation of the derrick floor above sea level is 6539 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

To complete as an artesian water well, 1389.50' of 2 3/8" EUE tubing was cemented to the surface with 290 sacks of Portland cement mixed in a ratio of 5 gal/sack. A tubing plug was run ahead of fresh water, and bottomed on a choke at 1363.5', leaving 26.0' of cement in the bottom joint of tubing. Twenty perforations at 1250' - 1255' were shot to make an artesian fresh water well.

124.27' of 9 5/8" cemented surface casing left in hole.

Pits have been filled and the location leveled and cleared of junk.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
