DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Drilled to 730', Hozal test.
As 100' Rod some 10' down (see log) we have set 50' of 5 1/2" casing casing, and set it with 100' of cement. When we complete, we will set 27 1/2" tubing 15' thru our production point, and cement thru our production sand with approx 3 sacks of cement. We plan then to perforate our production zone with 1 barrel of acid on the perforating gun to clean our mud. Then we plan to set the pump & tank, if necessary. Our hole is 4 3/4" -

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
