DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Drilled to 315' (Mezquites NW).
With oil show (see enclosed for information sheet), we have set 55' of 5 1/2"
surface casing, and set it with 3 SKS of cement. When we
complete, we will set 2 7/8" tubing 15' thru our production sand,
and cement thru our production sand with approx. 3 SKS. of cement.
We plan then to perforate our production zone with 1 barrel of acid
on the perforating gun to clean our sand. Then we plan to set
the pump and pack, if necessary.
Our hole is: 4 3/4"

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
