The elevation of the derrick floor above sea level is 1686.7 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Drilled to 315' / Alameda 1100'

Should we hit oil, we plan to set 55' of 5 1/2" casing around and set it with 84KS of cement. When we complete, we will set 2 7/8" tubing 15' then our production sand, and cement thru our production sand with approx. 3 SKS of cement. We plan to then separate our production zone with 1 barrel of acid on the perforating gun to clean our sand. Then we plan to set the pump & tanks, if necessary. Our hole is 11 3/4" -

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Jorge Sennetitch
