(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

_____ 1 December _____, 1961

Well No. 7-CX is located 3026' ft. from [N] line and 1040' ft. from [E] line of sec. 2

NW 1/4 NE 1/4 Sec. 2
41 (1/4 Sec. 4 and Sec. 46.) (Twp.) 17 N. 11 W. N. M. P. M.
Wilder (Range) (Meridian)
McKinley (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 6700' ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

500' Reservoir test:

Should we find oil, we plan to set 7" (or 10") of 2 7/8" tubing, 15' thru our production sand, and cement our production zone with approx. 2' of cement. We then plan to perforate our production zone (after taking electrical log) with 1 barrel of acid on the perforating gun (if necessary), at 2 barrels of acid, to clean the sand. Then to sand extensively, take a drill stem test (if necessary), and stop when your instructions. Our hole will be 4 3/4", and 1' a 10' casing will be taken, along with cores, if necessary.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
