Dear Mr. Durben:

Annual mechanical integrity tests on the referenced water injection wells indicate casing or packer leaks. In order to insure the protection of hydrocarbon bearing and fresh water zones, you are hereby directed to initiate remedial action within 60 days.

NMOCD Rule 103 states that all production and injection wells shall be identified by a sign, posted not more than 20 feet from such well, and such sign shall be of durable construction and the lettering thereon shall be kept in legible condition and shall be large enough to be legible under normal conditions at a distance of 50 feet. Field inspection of the Hospah, Hanson and Santa Fe Railroad leases found that many well signs are illegible or completely absent. In order to comply with NMOCD Rule 103, it will be necessary to repair existing signs or erect new signs as soon as possible.

Mr. Bob Durben
