17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Request permission to continue temporarily abandoned status of this well. The cumulative production from this well totaled 3,410 bbls prior to water encroachment from poor cement job around perforations in productive formation. There is a good possibility that a cement squeeze of the formation would be successful, but with current oil prices (\$15.75 p/bbl), any remedial work on the subject well is not economically feasible. Additionally, there are other formations behind the pipe in subject well that might prove productive, but current crude oil prices do not justify additional expenditure required to test these zones. Plugging the well at this time would result in the loss of these reserves for all time, and the obvious loss of royalty income to the Federal Government.

Casing in subject well is sound and no contamination of other formations is contemplated.
