February 24, 1988

Request permission to continue temporarily abandoned status of this well. The cumulative production from this well totaled 3,886 bbls of oil prior to excessive water enroachment. Oil production could be restored by the installation of downhole redi pump so that large quantities of fluid could be handled. However, such an operation is costly and cannot be justified at current crude oil prices (\$15.75 p/bbl). Additionally, there are other formation behind the pipe in subject well that might prove productive, but current oil prices at this time would result in the loss of these reserves for all time, and the obvious loss of royalty income to the Federal Government.

Casing in subject well is sound and no contamination of other formations is contemplated.
