MAR 22 1984

OIL CON. DIV.
DIST. 3

Encountered artesian water flow, approx. 37.5 GPM second day after drilling past the 500± FT Level.
Efforts to cement water zone failed when cementing 4 1/2" casing(See Item 2 above and Item 8).
On 2/1/84 Installed 3" Aluminum pipe from well to near by arroyo to discharge artesian water. Flow rate still at 37.5 GPM. Water communicated with surface 10' east of surface pipe. Artesian water encountered surface fracture. Attempts to seal off surface fracture failed. Wash-out at surface fracture filled with gravel to prevent further erosion.

18. I hereby certify that the information above is true and complete to the best of my knowledge and belief.

Page 2 of 2

3rd attempt to squeeze-off water using Bradenhead Squeeze method and using the professional services of WoodCo. Cementing of Farmington and 275 bags of cement also failed. Surface fracture enlarges and increases water flow. 3rd attempt was performed on March 3, 1984. Installed 4" Aluminum pipe to discharge water to near by arroyo-replaced 3". Pulled suckerrod and Pump Jack on 3/14/84
