Merrion Oil & Gas proposes to return the subject well to production by May 1, 1997. Economic feasibility of compression and compressor design for the subject well were dependent upon the added production from the McCollum #1, which we expected to recomplate in a lower portion of the Mesaverde. The newly opened zone in the McCollum #1 proved to be nonproductive. Facility redesign without the McCollum production is ongoing, however the weather may cause difficulty in installation of surface equipment. We therefore request additional time to return the well to production.
