Describe the proposed program. If this application is to DEEPEN or PLUG BACK, give the data on the present productive zone and proposed new productive zone. Describe the blow out prevention program, if any. Use additional sheets if necessary.

Operator proposes to drill a 6 1/4" hole to approximately 470' GR using a water base mud. The Menefee sandstone will be cored from 470' to 500' GR and evaluated by examining the core. If the analysis concludes that the Menefee sandstone has potential for oil production, 4 1/2" casing will be set to the top of the pay and cemented to the surface with 40 sacks of class "B" cement and completed open hole.
