If we complete, we will set 27' tubing 15' thru our production sands, and cement thru our production sands with approx. 12 SKS (?) of cement, circulating cement. We plan to then separate our production zones with 1 band + 1 and on the separating gum to clean out our sands. Then we plan to set the pump and tank, if necessary. Our log is: 4 3/4"

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
