Plan of Work: Drilling and testing to 6,200 ft.

### DETAILS OF WORK

Drill bit: 5 1/2" diameter  
Drill collar: 3 1/2" diameter  
Casing: 4 1/2" diameter  
Casing joints: 10 ft long  
Casing thickness: 1/2" per joint  
Casing weight: 10 lb per ft  
Casing length: 6,200 ft

Well was drilled to 9,000 ft winter, and temporarily abandoned due to salt water cuttings (1st attempt to test). When we tried to clean out hole, we found that it may be the surface line been tampered with, and pulled out, but also that foreign objects have been dumped into hole, making it much more difficult for us to progress beyond 6,200 ft. At level we used all the drillbits trying to get through the metal subsection, well being therefore plugged with metal cement plug, as per instructions, its filter side cleaned up, and abandoned. I am probably strongly considering taking legal action against "ersatz authority" for deliberate damage to my drilling.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
