DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Gallup was not deep enough so well was drilled to the Lakota. Set 154' of 5 1/2" surf. casing. Drilled 4 3/4" hole with air to total depth of 1589. Log tops: Gallup 46, Middle Gallup 242, Sanastee 1044, Greenhorn 1360, Graneros 1388, sample top of first Lakota sandstone 1568. Had 300' of water fill-up from first Lakota sandstone. Plan to set cement plugs as follows: 5 sx at 1564 (from 1539 to 1589), 5 sx at 154 (at base of surf. casing), 5 sx at surface with regulation marker in top.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
