DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

"This stratigraphic test was drilled to a total depth of 4024'. No commercial quantities of hydrocarbons were encountered. We now propose to set the following cement plugs to plug and abandon.

3950-3850' - 35 sacks common cement
1150-1050' - 35 sacks common cement
325- 285' - 20 sacks common cement
31- 11' - 10 sacks common cement

These plugs have been verbally approved by the USGS representative.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
