March 30, 1959

Well No. 1 is located 990 ft. from N line and 990 ft. from E line of sec. 8

NE 1/4 - NE 1/4 Section 8 (1/4 Sec. and Sec. No.) 22N (Twp.) 4W (Range) N.M.P.M. (Meridian)

Undesignated (Field) San Juan (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 6014 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was originally drilled to a TD of 6510' to test the Dakota, but was originally completed in the Gullip formation from 5823' to 5831'. Production from this zone was exhausted to the point it was not a commercial operation. Squared off the Gullip formation & recompleted in the Gullip formation three points, 5135-53' & 5823-45' which after approximately 6 months proved to be non-commercial. Run & set Baker GI bridge plug at 5120' & dumped 6 cu. cement on top of plug. Perforated & tested New Verde formation from 5790' to 4807' & found no commercial production. *11V pipe squeezed*

It is our intention to plug & abandon this well by running from point indicator & pulling 5 1/2" casing. If pipe is out below top of Pictured Cliffs at 2024', a 100' cement plug will be set at top of Pictured Cliffs formation & a 100' cement plug will be set at the top of the Gullip formation. A 100' cement plug will be set in top of 5 1/2" where cut off. A 25 cu. cement plug will be set at bottom of surface pipe at 240' & a 50 cu. cement plug will be set at surface & permanent marker installed. *Cover*

that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
