The elevation of the derrick floor above sea level is 7478 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This is a retest of well preparatory to recompletion or abandonment. Well was drilled to 8432' T. D. through Dakota sandstone. 17 5 1/2" O. D. casing was run to 7400' and cemented to 5150'. 6 shots 6926-34 squeezed with 32 sacks of cement. Drilled out and reperforated 7260-79 with 114 shots and 7305-16 with 44 shots. Plan to pull rods and tubing and test on swab. If well performs, plan to run 2 1/2" gas line from S-3 well and use gas lift, if approved by USGS and State. If gas lift is not approved, plan to plug and abandon well by pulling 5 1/2" casing.

I understand that this plan of work must receive approval by the Geological Survey before operations may be commenced.
