Dear Mr. Marcum:

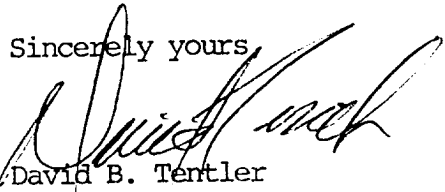

Please be advised that Billco Energy has done extensive reworking of the aforementioned well. We have determined that the well capable of economic production of natural gas and are requesting your instructions on how we can proceed to have this well hooked to a meter.

As you know, there was a plugging order on this well, however, we did get a one year extension to rework and bring this well back into production. We feel that the well will produce between fifteen and twenty MCF a day, once the well is hooked up to a meter. We have determined that a .250 orifice plate will be sufficient to begin with.

Please let me know what we need to do to get this well back into production. It has been shut-in for a rather extended period of time. The well pressures equalize at about 200 pounds, both casing and tubing, and as a result we feel that it would economical to produce this well.

Thanks again for you usual cooperation.

Sincerely yours

  
David B. Tentler
