

well file

Petro-Lewis Corp.

Gentlemen,

In reference to the work-over done to Federal Media Unit #5 (sec 22 19 N 3 W) I shall report the results of the work-over.

Five (5) ponds were constructed to contain water flowing from well-head on location and were all fenced. A drillable plug was set at 794' down casing to stop flow of water. Used 150 sacks of cement to fill casing from plug to braden-head

If you need information or if I need to submit additional reports please let me know. Thank You.
