

DEVELOPMENT PLAN  
JICARILLA TRIBAL 369 NO. 2

The proposed location is in an area of current drilling development with existing roads. Only 0.8 miles of new road construction is required. The road will be through mainly a sagebrush-covered area with a few juniper and pinon trees. The location will have the same vegetation cover and no ponderosa pine will be disturbed. Approval for surface work will be obtained from the Jicarilla Apache Tribe.

There are no camps or airstrips nearby. Arrangements have been made to truck water from Largo Canyon, a distance of 42 miles. Upon completion of the well the location will be cleaned, levelled, and the reserve pits backfilled. The attached sketches show in detail the location of the proposed well.
