To Whom It May Concern:

The New Mexico Oil Conservation Division, as part of its Underground Injection Control authority, requires Gas Company of New Mexico to perform an MIT on the above injection wells once every five years. MIT's are due on these wells on or before July 1, 1993.

The mechanical integrity of the casing-tubing annulus is tested by submitting the annulus to a pressure of 300 psi for 30 minutes with less than ten percent bleed-off as outlined in Commission Rule 704.

We require a 24 to 48 hour notice so that we may be present to witness testing. Gas Company of New Mexico will furnish personnel and equipment to complete the tests.

If you have any questions please feel free to contact this office.

Sincerely,

Dianna K. Fairhurst  
Deputy Oil & Gas Inspector
