

P.Tco prod. #34037

me

How do you think this should
be handled?

It's not in Engard & shows
Compilant ~~is~~, but ^{well} is inactive.

There is no prop. Code, & I
don't know if I should create
one - it's probably going to be
plugged.

88

Will wait since there
is no active OCO OGRW
for this operator.

When it is plugged it
will be put into ENGARD
through program with all
the other plugged wells?
