13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Roddy Production Co. originally requested to leave this well shut in pending recompletion evaluation. Since that request was approved the price of oil has increased to a level that would justify the repair work to return to production from the Dakota formation. However this well only lacks a few months of being eligible for the Production Restoration Project tax incentive available from the State of New Mexico. Roddy Production Co. requests the well remain shut in through January 2000 to complete the qualification period. The repair workover will be completed in February, 2000. Qualifying for this exemption from severance taxes will allow Roddy Production Co. to continue to produce the well for a longer period of time and increase the ultimate recovery of oil reserves from this formation.
