17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Measures to protect the casing from electrolysis deterioration opposite the Menefee formation have been required by the M.M.S. Lewis Energy Corporation requests approval of one of the following proposals:

- A) To perform a cement squeeze to cover the Menefee formation and protect the casing from electrolysis deterioration.
- B) To install cathodic protection to the casing. This would consist of a system where an electrical current is applied to the casing and passed on to a shallow ground well.

Whichever method is accepted, it will be performed in accordance with sound and accepted engineering practices.

We anticipate performing this work by approximately July, 1982.
