13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Veteran Exploration, Inc. proposes to recompleate the San Isidro 14-4 well by the following procedure:

Plan to set a retrievable bridge plug at a depth of 2950' in order to isolate the Mesa Verde from the Mancos formation. Plan to selectively perforate the Menefee formation at 2716' - 2718', 2746' - 2748', and 2896' - 2898'. Plan to clean out after perforating and swab well down. In the event the Menefee is adequately capable of producing hydrocarbons in paying quantities, then plan to set a pumping unit for production purposes. If the Menefree testing proves unsuccessful and minimal hydrocarbons are encountered, then operator proposes to retrieve said bridge plug. Then operator plans to plug and abandon all zones in the subject well.

Veteran Exploration, Inc. is now the operator of the subject well. We have bond number NM1807 indicating that we are properly bonded.
