If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Gary-Williams Oil Producer, Inc. requests permission to permanently leave a plastic pipeline from the San Isidro 12, #4 section 12-20N-3W to the San Isidro 12, #2 to complete a common tank battery for the above named wells. The pipeline will transport oil from the San Isidro 12, #4 to a common tank battery at the San Isidro 12, #2.

The pipeline has risers to the surface. These risers were installed 800' apart along the length of the flowline. On top of each riser is a valve, tapped bullplug with a pressure guage protected by a guard made of 1-1/4" pipe. This pressure monitoring system allows pumpers to monitor the line at several given points on a daily basis. The pipeline has been laid 4' below the surface and can withstand heat up to 150° and up to 250 pounds working pressure.

The BLM is welcome to inspect this pipeline at any time.

Note: Plastic pipe was used in preference to iron or steel pipe to prevent the flow line from plugging off with parafin.

18. I hereby certify that the foregoing is true and correct
