DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Cable tools were lost in the bottom of the hole and were oriented in place. A combination of Bentonite and 25 sacks of cement were used to seal off the water at 410 to 420 and from 700 to 745. A 40 ft. length of 10" surface casing was cemented in place and a 4" rubber plug cemented in place.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
