If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

This oil well is uneconomical to produce and plugging is requested to allow removal of material from lease. This well produced for only three months to include April, May and June, 1971, for a total production of 2,879.99 bbls., at which time the well went to water. Well bore has 1,300' of 24 lb. 8-5/8" surface casing circulated to surface. Set 4,009' of 14 lb. and 15.5 lb., 5 1/2" production casing with good cement bond up to approximately 3700'. Propose to shoot off 5 1/2" O.D. casing at 3,700' and pull same. Set 150' plug (45 sx) 50' in and 100' above casing stub. Set 75 sx plug 1250' - 1350' across base of surface casing. Set 10 sx surface plug and marker. Wm. Gruenerwald & Associates, Inc., requests approval to plug this well late in the spring or in the summer of 1972 when good weather is the norm.

Mr. McGrath has approved this intent to abandon with the following stipulations:
Approval subject to squeezing perfs with cement and covering TD to 3900 with cement plug.
