Re: BS&W disposal at the Santa Fe Leggs #1 Tank Battery

Dear Charlie:

Envirotech Inc. has moved three full loads (60 cubic yards) of bottoms from the pit adjacent to the gun barrel to a recycling center in southeast New Mexico. There are still 20 cubic yards or more of the asphaltic bottoms remaining in the temporary pit. We discussed the issue of space availability in your office with Mr. Denny Foust in regard to landfarming the remainder of the bottoms on-site. This does not seem to be practical due the volume of petroleum hydrocarbon solids remaining on location at the tank battery. There is not enough area left on location to landfarm all of the remaining material.

We are herein seeking your approval to remove one more load of asphaltic solids to a recycling center. Costs to complete this task are as follows:

Trackhoe - Load	\$110.00
Tip Fees - 20 Cubic Yards	\$380.00
Truck liners (material and labor)	\$100.00
Transport w/ Special Waste Permit (1 loads)	<u>\$1,900.00</u>
Total	\$2,490.00

These costs do not include any applicable tax. Terms of payment are net thirty days with 1.5% monthly interest on the outstanding balance. To accept this proposal please provide a purchase order or sign where indicated below and return a copy to our office by fax.

If you have any questions or comments regarding this option for handling bottom sediments and waste from the tanks please feel free to contact us at 505-632-0615.

Sincerely,

Envirotech Inc.

Acceptance:
