## MGBIL OIL CORPORATION P. O. Box 633 Midland, Texas 79701

## TWELVE-POINT SURFACE USE PLAN FOR DRILLING OPERATIONS ON FEDERAL LEASES

* Planned access roads.  * Location of wells.  * Lateral roads to well location.  * Location of tank batteries and flow lines. None  Location and types of water supply: Water will be hauled to the drill site.  Methods for handling waste disposal: Waste will be burned, buried and/or hauled from the drill site.  Location of camps: None  Location of air strips: None  Location layout to include position or rig, mud tanks, reserve pits, burn pits, pipe racks, etc.: Well will be drilled with a truck-mounted range A small mud pit and circulation pit will be dug nearby.  Plans for restoration of the surface: Drill site will be cleaned - The surface will be returned to original grade as near as practical and left for returned reserved in necessary.  Any other information that may be used in evaluating the impact on	as	se Navajo "H" Well No. 2
* Existing roads including location of the exit from the main highway.  * Planned access roads.  * Location of wells.  * Lateral roads to well location.  * Location of tank batteries and flow lines. None  Location and types of water supply: Water will be hauled to the drill sit  Methods for handling waste disposal: Waste will be burned, buried and/or hauled from the drill site.  Location of camps: None  Location of air strips: None  Location layout to include position or rig, mud tanks, reserve pits, burn pits, pipe racks, etc.: Well will be drilled with a truck-mounted r A small mud pit and circulation pit will be dug nearby.  Plans for restoration of the surface: Drill site will be cleaned - The su will be returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original grade as near as practical and left for returned to original	: ] ]  -	l Location: 2112' FNL & 751.1' FEL, Sec. 36, 122N, RI5W
* Planned access roads.  * Location of wells.  * Lateral roads to well location.  * Location of tank batteries and flow lines. None  Location and types of water supply: Water will be hauled to the drill site.  Methods for handling waste disposal: Waste will be burned, buried and/or hauled from the drill site.  Location of camps: None  Location of air strips: None  Location layout to include position or rig, mud tanks, reserve pits, burn pits, pipe racks, etc.: Well will be drilled with a truck-mounted rack a small mud pit and circulation pit will be dug nearby.  Plans for restoration of the surface: Drill site will be cleaned - The surface will be returned to original grade as near as practical and left for returned to near a surface of natural vegetation. The area will be reseeded if necessary.  Any other information that may be used in evaluating the impact on environment: This well is in a semiarid region and rocky broken country were reseased.		
* Location of wells.  * Lateral roads to well location.  * Location of tank batteries and flow lines. None  Location and types of water supply: Water will be hauled to the drill site.  Methods for handling waste disposal: Waste will be burned, buried and/or hauled from the drill site.  Location of camps: None  Location of air strips: None  Location layout to include position or rig, mud tanks, reserve pits, burn pits, pipe racks, etc.: Well will be drilled with a truck-mounted range A small mud pit and circulation pit will be dug nearby.  Plans for restoration of the surface: Drill site will be cleaned - The surface will be returned to original grade as near as practical and left for returned to the surface will be reseeded if necessary.  Any other information that may be used in evaluating the impact on environment: This well is in a semiarid region and rocky broken country were as a semiarid region and rocky broken country were researched.		* Existing roads including location of the exit from the main highway.
* Lateral roads to well location.  * Location of tank batteries and flow lines. None  Location and types of water supply: Water will be hauled to the drill site.  Methods for handling waste disposal: Waste will be burned, buried and/or hauled from the drill site.  Location of camps: None  Location of air strips: None  Location layout to include position or rig, mud tanks, reserve pits, burn pits, pipe racks, etc.: Well will be drilled with a truck-mounted range A small mud pit and circulation pit will be dug nearby.  Plans for restoration of the surface: Drill site will be cleaned - The surface will be returned to original grade as near as practical and left for returned to original grade as nea		* Planned access roads.
