If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

This well was perforated with 30 holes from 3281 - 3604'. The well was then sand-water frac'd and swab tested. No commercial quantities of oil or gas were tested. We propose to plug back this well from PBTD 3611' to 3165' with 50 sx neat cement. We will then perf and test selected zones in the Mesaverde formation.

Discussed this procedure with Steve Mason 11-10-87 during phone conversation.

A plat (NMOCD Form C-102) is attached reflecting the proposed change to Wildcat Mesaverde.

18. I hereby certify that the foregoing is true and correct
