Attn: Mr. Frank Chavez
1000 Rio Brazos
Aztec, NM 87410

Dear Frank:

Attached are Completion and Well History reports for the Santa Fe 20 #5.

The well was originally drilled as an Entrada test. However, the Entrada was dry and pipe was subsequently set to test the Gallup and Mesaverde intervals. Both of these zones tested water with uneconomic quantities of hydrocarbons.

The wellbore is presently shut-in and temporarily abandoned. We plan to convert the well for use as a produced water disposal well and, therefore, do not plan to do further work until the necessary permits are received.

Yours truly,

Steven S. Dunn
Operations Manager
