## 13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

On 3/6/2000 a cast iron bridge plug was set @ 1068'. Perforate Mesaverde (La Ventana) 852, 60, 77, 89, 93, 920, 35, 49, 70, 79, 94, and 1006' w/1-spf (12 holes total). Swab test interval with no commercial hydrocarbons indicated.

A cast iron bridge plug will be set at 690' with 50' of cement on top. This will permanently plug the Mesaverde formation.

Plan to test the Basin Fruitland Coal from approximately 350'-400'. A C-102 dedicating the North half of this section to the Fruitland Coal is attached.

Should the coal test fail, the well will be abandoned. A cement plug will be placed across the coal perforations. A cement plug will be placed from 50' below the surface casing to the surface.
