17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

The well was drilled to a total depth of 2427' on October 29, 1955. 8 5/8" OD, 24#, J-55 surface casing was set at 301' and cemented with 175 sacks of cement. 5 1/2" OD, 14#, J-55 production casing was set at 1413', and cemented with 175 sacks of cement.

We are proposing to plug and abandon this well by placing a 20 sack cement plug at 2305' RBM. A 40 sack cement plug will be placed across the Ojo Alamo formation inside the 5 1/2" OD casing at approximately 1927' RBM. The 5 1/2" OD casing will be cut and pulled at approximately 314' RBM and a 20 sack cement plug will be placed across the bottom of the surface casing and a 10 sack cement plug across the top of the surface casing. A regulation P&A marker will be installed and the location will be restored to its natural condition.
