Undesignated Gallup
(Field)

Rio Arriba
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is _____ ft. (To be reported later.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to a depth of approximately 6000' and complete in the Gallup formation. Stimulation will be contingent upon natural flow in this zone. Rotary tools will be used to total depth.

Casing program will be as follows:

SIZE	DEPTH	CEMENT	REMARKS
8-5/8"	400'		Test—circulate.
5-1/2"	6000'		150% theoretical amount to bring top cement to approximately 5000' or about 500' above top Gallup.

Copies of location plat are attached. A copy of any survey taken will be submitted upon completion of well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
