GEOLOGICAL SURVEY

1. The first step in the process of determining the value of a property is to identify the property and its location. This is done by obtaining a description of the property from the owner or a reliable source. The description should include the name of the property, its address, and any other identifying information. Once the property has been identified, the next step is to determine its value. This is done by comparing the property to similar properties in the area and by considering factors such as the size, condition, and location of the property. The value of the property is then determined based on these factors.

Journal of Management Inquiry

IMPROVED WATER SAVING

ALL INFORMATION CONTAINED HEREIN IS UNCLASSIFIED

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked", or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.
