DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to dual complete this well in the Gallup formation. Present TD of the well is 6900' with 5 1/2" casing at that depth. Dakota perforations are 6784'-6832'. The proposed work plan is as follows: Set Model "D" packer between Dakota and Gallup formations. Perforate Gallup interval 5652'-5865' and sand frac the Gallup. Set "MDE" packer @ 5550'. The Gallup will be crossed over to the tubing and produced up tubing and the Dakota through the casing-tubing annulus. Approval has been obtained from the N.M.O.C.C. to dual complete this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Continental Oil Company
