

Core #3, from 2169' to 2192', recovered 21' as follows:
15' sandy, gray, white, occasional dark green, fine to medium texture, micaceous and carbonaceous with green and red inclusions. Number of thin argillaceous and carbonaceous streaks in matrix less than 5% or none.
6' shale, gray, sandy, micaceous and carbonaceous, streaks of sandy shale.

• 3407 318 0075

Core #1, from 2120' to 2179', recovered 28' sand, gray-white to pale green, uniform medium texture, sub round to sub angular, micaceous and carbonaceous, occasional flint and red ironstone. Thin and irregular streaks at irregular intervals.

After setting the 5-1/2" casing, piling was drilled out and we started coring at 2120'.
