DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

A rotary rig was moved in on location on September 15, 1961, and the above well was cleaned out to the old total depth of 2865. A 1 1/2" casing was set at 2865 and cemented with 100 sacks. The well was perforated from 2842 to 2850 with 48 holes. We then fraced with 40,000# sand and 35,000 gallons water. The break down pressure was 17,000# p.s.i. A completion rig was moved on location September 20, 1961, initial attempt to swab said well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
