### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The above well was formerly the Oscar and Mike Abraham No. 1 Behula. It will be carried now as the W. A. Maros No. 1 Behula. We plan to squeeze off the old perforations with 200 sacks of cement and re-perforate a smaller zone. Then sand-water fracture with 30,000 gallons of water and 30,000 lbs. of sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
